## New Product Profile

### **Bioresorbable Polymer Surgical Mesh** **Manufacturer: *TyRX Pharma, Inc.***

Bioresorbable polymer surgical mesh is used for the repair of hernias and other abdominal fascial or muscular deficiencies. The mesh, which is also indicated to be used as a reinforcement or bridging material, is designed with a bioresorbable polymer coating so that less implant material remains following resorption. This may help maximize patient comfort during the postoperative period. The surgical mesh also features handling characteristics that may facilitate precise placement during surgical repair.
